DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2, 6, and 8, drawn to buffering video data in a CATV distribution system, are classified in class 725, subclass 94.
 - II. Claims 3 and 5, drawn to diagnostic testing of generic data on a LAN, are classified in class 370, subclass 241.
 - III. Claim 4, drawn to fault recovery for packet timing error, is classified in class 714, subclass 55.
 - IV. Claim 7, drawn to video distribution system with upstream communication for control process, is classified in class 725, subclass 105.
- 2. Inventions I IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. See MPEP § 806.05(d).
 - (1) In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because:

Art Unit: 2611

- The details of the broadest subcombination II of claim 3 such as, "A
 process for packet order control, comprising (a) checking a flag to
 guarantee data order; and (b) ignoring a mixed order instead of asking for
 resending" is not related to the broadest combination I of claim 1.
- The details of the broadest subcombination III of claim 4 such as, "A
 process for packet timing control, comprising absorbing unstable time
 delay" is not related to the broadest subcombination II of claim 3 and the
 broadest combination I of claim 1.
- The details of the broadest subcombination IV of claim 7 such as, "A process for video data control, wherein old scene will be resent to video terminal if wrong packet were received or time delay is too long" is not related to the broadest subcombination III of claim 4, the broadest subcombination II of claim 1.
- (2) Invention group II has separate utility apart from a CATV distribution system and can be used other than in television broadcast, such as in diagnostic testing of generic data on a LAN.

Invention group III has separate utility apart from a CATV distribution system and diagnostic testing of generic data on a LAN and can be used in fault recovery for packet timing error.

Invention group IV has separate utility apart from a CATV distribution system, diagnostic testing of generic data on a LAN, and fault recovery for packet timing error and can be used in video distribution system with upstream communication for control process.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Attorney Brian C. McCormack on 07/07/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Application/Control Number: 09/911,080

Art Unit: 2611

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harun M. Yimam whose telephone number is 571-272-7260. The examiner can normally be reached on M-F 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Grant can be reached on 571-272-7294. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
